Accessing Journal Databases

http://unihub.mdx.ac.uk/your-study/library-and-it-support
Access the Journal Databases
myUniHub > My Study > My Library > Databases

Choose ‘Databases’ from the list.
You will now see our list of journal databases

Journal databases provide access to journal articles, but many also contain book chapters, conference proceedings, standards, reports etc.

Initially you will be taken to ‘Databases A’ i.e. all the databases beginning with the letter ‘A’. The list contains journal databases plus some other resources.
To see a list of journal databases relevant to a particular subject area, click on the drop-down menu and select a subject such as Computing, Maths and Engineering or Law and Politics.

And a list of relevant journal databases will be displayed for the chosen subject area. Just click on the title to open the database.
To access a specific journal database, click on the relevant letter i.e. the 1st letter of the name of the database that you want to use, eg. ‘I’ for IEEE Xplore. A new list of databases will open. Click on the title of the journal database that you want to use. The database will open and you can start searching.
If you are using library resources from outside the University, you may sometimes experience problems accessing full-text items. A troubleshooting online guide is available:

MyUniHub > MyStudy > MyLibrary > Library Subject Guides > User Guides > Accessing Electronic Resources.
